

How should high-cost Europe stimulate advanced research and innovation as basis for sustainable industry in global competition?

EU Lisbon Presid Conf 2007 - HM Borchgrevink Norway

Modern research and innovation are largely technology driven. New technology develops across fields in synergy between industry and leading interdisciplinary researchers attracted by advanced infrastructure. The arena is global.

- Is the focus of the Green Paper too European?
- Are European research institutions optimally organised, co-located and networked to attract international researchers and industry for interdisciplinary and intersectoral collaboration?
- Do we need more flexible part-time “time-bank” positions to build multidisciplinary and intersectoral research teams?
- Relaunch the Charter/Code as Directive+Recommendations?
- Should Europe invest more in advanced R&T infrastructure?
