Current Position: 2012- Research Associate, CFCUL.
2014-2015- On leave as Official Visiting Scholar at the University of Cambridge.

Research interests: My research spans two broad areas in the interface between the social sciences and life sciences, exploring cross-disciplinarity and transfer of knowledge. The first centres on evolutionary theory vs. social and biological engineering from the late eighteenth century to the present, including topics on reproduction, population and eugenics. The second addresses social ontology and questions of epistemology in economics and social science as well as covering networks of knowledge spanning from mind to society and Big Data. I have a particular interest in the work of Friedrich Hayek as exponent of cross-disciplinarity centring on the manifold dimensions of knowledge, pioneer of cognitive connectionist models and a co-evolutionary rule-based model to explain culture.

Education: I completed my B.A. in Philosophy at UCP and the curricular component of the M.A. in «Sociology and Portuguese Reality» at Universidade Nova de Lisboa. I earned my M.A. in Philosophy from Université du Québec à Montréal where I also received my Ph.D. in Philosophy in 2004. My dissertation «Friedrich Hayek and Social Theory: From Subjectivism to Evolutionary Self-Organisation» was supervised by Professor Paul Dumouchel. My post-doctoral research “Neo-Darwinism and the Amendable Order: An Inquiry into the Theoretical Foundations and Normative Implications of the Application of Evolutionary Models to Economics and Social Theory», was funded by FCT and conducted at ISEG, New University of Lisbon with research

leaves at the University of Cambridge.
